Assignment 3

- In my zip folder named Devanshu, there is another folder named XQueryXML_Files.
- Also, in my zip folder, there is a video which shows the output of all the testing files.
- In this folder, all my XQuery functions are in one file named Solutions.xquery and I call these functions separately in testing files as follows:
    - getPatientTreatments -> testing1.xquery
    - getPatientDrugs -> testing2.xquery
    - getTreatmentInfo -> testing3.xquery
    - getProviderInfo -> testing4.xquery
    - getDrugInfo -> testing5.xquery
- I find it difficult to use oxygen as I have never used it before and also watching demos podcast gives idea about writing xquery functions, but it does not show how to use Oxygen XML editor.
